Summary

Software Engineer with experience in back-end development, AI-driven tooling, and large-scale infrastructure. At TomTom, I build and maintain core services for electric vehicles and develop automation solutions, including LLM-based tools that streamline company-wide processes. With a Computer Science and Engineering background from TU Delft, I bring strong problem-solving skills, a solid technical foundation, and a focus on delivering efficient, scalable software. I thrive on tackling complex challenges and contributing to real-world impactful projects.

Work Experience

TomTom

Amsterdam, Netherlands

SOFTWARE ENGINEER

September 2023 - Present

- Maintained and developed the infrastructure of an IVI project creating automatization pipelines to replace manual labor.
- Developed a company-wide LLM based tool automating and improving feedback ingestion.
- Maintained, developed and integrated a core company service utilized for electric vehicles intended for a large-scale user base.
- Developed and maintained EV data and metrics delivered to customers and downstream teams for ML training

EyaSolutions

Delft, Netherlands
